## PROBLEM STATEMENT

1. Luke is a student who needs to monitor his daily expenses because he has to plan his expenses within his monthly pocket money.
2. Mitchell is an employee who needs to plan his monthly budget because he has to allocate his budget category-wise.
3. Claire is a homemaker who needs to analyze the expenses visually because it gives a better understanding of the relative spending of expenses.
4. Cameron is a forgetful, lazy person who needs to record all the expenses digitally and access them anywhere because it gives better, immediate storage of data and avoids missing out data.
5. Haley is a socially active person who needs to split expenses equally/unequally within her friends group because it enables better efficient way to split expenses among the group.
